

EIOPA IT & Data Committee XBRL Webinar

19th October 2012

- General introduction
- XBRL projects timelines and status
 - o taxonomy
 - o tool for undertakings
 - o other XBRL related projects
- DPM
 - o concept
 - o process
 - o results (full draft and proof-of-concept)
- Proof-of-concept taxonomy
 - o modularization
 - o architecture and content
 - o rendering and valid combinations
 - o examples
- Important topics and issues
- Q/A

2. XBRL projects timelines and status

Taxonomy timeline

Taxonomy delivery or event.

External income/dependency of the Taxonomy Project.

Reporting Tool for Undertakings

Objective: To provide undertakings with a tool to easily create complete and valid XBRL instances from Solvency II harmonized quantitative reporting templates.

Timetable / Milestones

Risks / Late deliverables / Challenges

Progress

Achieved:

- Project setup
- Project meetings on 29/3 and 24/4
- Questionnaire and draft business requirements to ITDC on 4/5 (deadline 22/5)
- Evaluation of answers and update of requirements document
- Stakeholder review by IRSG
- Solvency Capital Requirements and help utilities for calculation under discussion in Business Subgroup

Ongoing:

- Preparation of second draft of business requirements (tender documentation)
- Procurement procedure

To come:

- Procurement award
- Start of the implementation
- Market test

XBRL taxonomy development

Objective: To develop a stable XBRL taxonomy based on the final reporting templates so that undertakings are able to submit valid data in a harmonised format to the National Supervisory Authorities.

Timetable / Milestones

Risks / Late deliverables / Challenges

- Dependencies on finalisation Solvency II templates (changes to deadline)
- Necessary feedback loops, especially regarding validation
- Need for a new technical consultation
- Co-ordination with EBA
- Possible NSA interim implementations

Progress

Achieved:

- Work carried out by the Taxonomy Taskforce (lead: Eric Jarry)
- Contract with BR-AG to support the Data Point Modelling process and Taxonomy implementation
- 6 meetings between BR-AG and IGSRR SG3 for DPM analysis
- On-site, technical workshops, including a session with Business and IT Subgroups
- Publication of DPM covering solvency II templates unifying in one workbook the Solo, Group, Quarterly Annual and Public Disclosure Reporting.

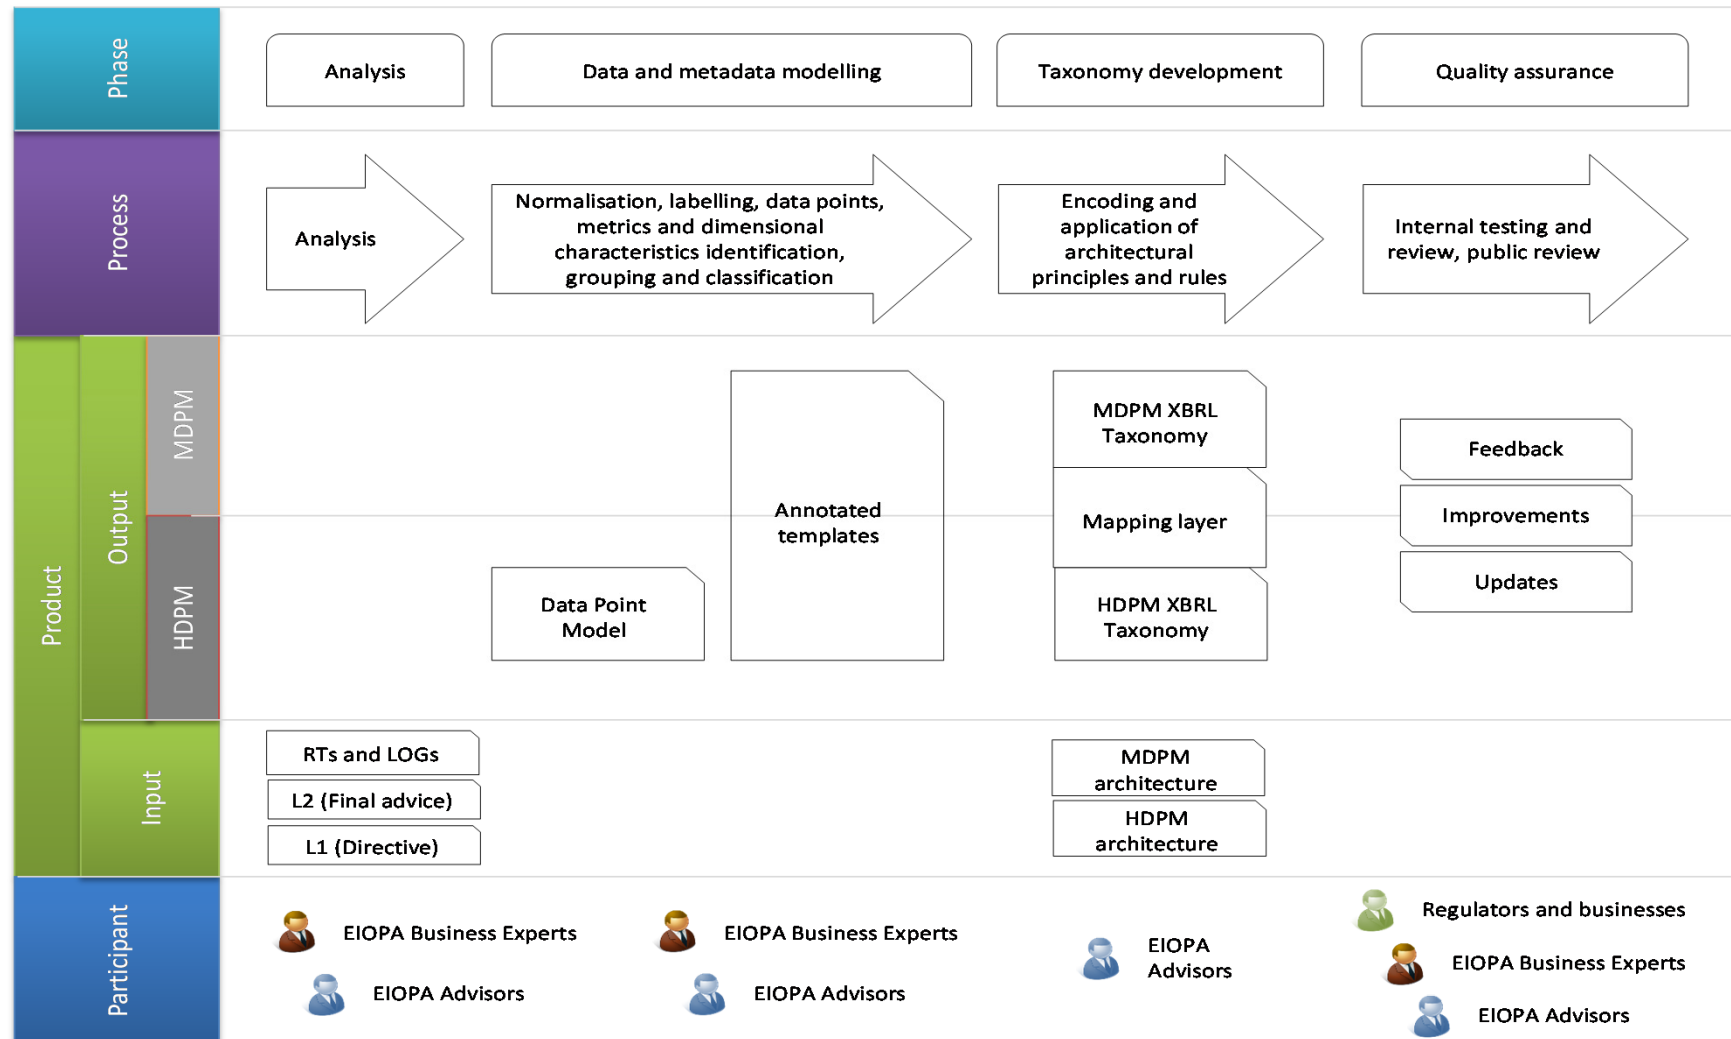

Ongoing:

- Implementation of the first draft Solvency II taxonomy covering all templates
- Inclusion of the financial stability requirements on DPM Workbook
- QA coordination

To come:

- Inclusion of different subset in the DPM Workbook
- Stable taxonomy by Q4 2012
- Inclusion of other subsets (EIOPA&NSA, ECB, RM, Collage)
- IORP requirements
- NSA and Fillers guidelines
- Collaboration with TfU

The taxonomy development PROCESS

3. DPM

Form centric vs. data centric approach

"form centric"
based on presentation that conveys semantics
(interpretation in certain contexts)

Watermelon Inc
Consolidated Audited Annual Report

	2011-12-31	2010-12-31
Assets		
Assets, Current		
Cash and cash equivalents	10 339	6 111

- DPM is template independent (data centric) - all information about data point is explicit
- It is easy to trace the difference between every two data points across entire reporting requirement
- DPM could be a guideline how to organize the data on reporting entity side (storage and BI systems)
- The quality of reporting requirements/templates is improving (consistent labeling, hierarchical structures)
- Model is very stable but possible to extend if required (reusing of concepts is priority, adding/extending of concepts/hierarchies is possible as long as it doesn't break the logic of model)

F1
Life and Health SLT Technical Provisions (Annual)

Cell not relevant	Cell used more than once in one single template	Cell reported in a different template	Formula
-------------------	---	---------------------------------------	---------

Insurance with profit participation	Index-linked and unit-linked insurance		Other life insurance		Annuitants stemming from non-life insurance contracts and relating to insurance obligation other than health insurance	Accepted reinsurance	Total (Life other than health insurance, incl. Unit-Linked)
	Contracts without options and guarantees	Contracts with options and guarantees	Contracts without options and guarantees	Contracts with options and guarantees			
A1	A3	A4	A5	A6	A7	A8	A9=A1+A3+A4+A5+A6+A7

Technical provisions calculated as a whole (Replicable portfolio)

Health insurance (direct business)		Annuitants stemming from non-life insurance contracts not relating to health insurance obligations	Health reinsurance (reinsurance accepted)	Total (Health similar to life insurance)
Contracts without options and guarantees	Contracts with options and guarantees			
A10	A11	A12	A13	A14=A10+A11+A12+A13

A data point: Net carrying amount of not yet unimpaired but already past due (over 180 days) debt securities held, issued in EUR by MFIs located in EMU with original maturity under one year, measured at amortised cost and relating only to business activities conducted in EU (local business).

Measure (metric):	Portfolios:	Impairment status:	Time reference:

Common to other products	x25		1		2. Motor	x3		+				

Information about
arithmetical
relations between
members of domain

Templates annotation:

Types of annotations

- metric
 - o indication of a data type (type of expected value) to be reported for data point (every data point must have one and only one Metric)
 - o annotation: „Metric: {metric name}“, where {metric name} could be „String“, „Decimal“, „Monetary“, etc.
- explicit dimension
 - o breakdowns with predefined values (members); members are gathered in domains (lists of members) and subdomains (hierarchies of members)
 - o annotation:
 - „{domain code}:{dimension code}/{member name}“ – pairs of dimension members
 - „{domain code}:{dimension code}/All members ({name of starting member})“
 - information about sets of pairs of dimension-members
 - {name of starting member} is optional and identifies the top level domain member opening the list of domain members potentially to be used; subdomain to be applied is identified in the DPM file in column “Comment”; if {name of starting member} is missing then all domain members of a subdomain are applicable for a data point
- typed dimension
 - o constraint of this breakdown is defined by a type, not by explicitly listing the applicable values, e.g. „non negative integer“ could be a typed domain of a typed dimension
 - o annotation: „{dimension code} (typed dimension)“

Templates annotation: Organization of annotation of open table

	Identification code	Group identification code	Currency used for reporting	Model used	Loss absorbing capacity of TP observable? (Y/N)	Loss absorbing capacity of deferred taxes observable? (Y/N)	Reference date	Reporting date	Accounting standard
	A1	A5	A6	A9	A17	A19

Group identification code (typed dimension)									

Legend:

Data cell

Metric

Dropdown list (based on explicit dimension)

Typed dimension

Explicit dimension

- for open table the annotation is ordered as follows from the left hand side:
 - properties of data points
 - typed dimensions (must be at least one – otherwise the table would not be open)
 - „dropdown lists” based on explicit dimensions (may not appear in every open table)
 - data points: metrics with ordinary explicit dimensions (must be at least one, could be artificial boolean item in case of join tables)
 - in lower-left side there are attributes applicable to entire table
 - more than one sets of those attributes is possible (multiplying the number of occurrences of those tables)
 - attributes in each set could be (i) metrics, (ii) typed dimension (number of occurrences of table would become theoretically unlimited), (iii) explicit dimension or (iv) dropdown list (number of occurrences of table is limited to a number of members in the subdomain used)

Templates annotation: Organization of annotation of closed table

	Net solvency capital requirement (including the loss-absorbing capacity of technical provisions)	Gross solvency capital requirement (excluding the loss-absorbing capacity of technical provisions)			
Market risk	A1	B1	RT:RT/Market risk		AP:II/Standard formula
Counterparty default risk	A2	B2	RT:RT/Counterparty default risk		AP:II/Standard formula
Life underwriting risk	A3	B3	RT:RT/Life underwriting risk		AP:II/Standard formula

Z axis:				Legend:	
CS:CS/Accounting consolidation-based method [method 1] and combination of methods 1 and 2				Data cell	
Metric: Monetary				Metric	
AM:VG/Solvency II				Dropdown list (based on explicit dimension)	
SE:SO/Insurance/reinsurance sector				Typed dimension	
				Explicit dimension	

- explicit dimensions differentiating information:
 - across columns - identified below the table
 - across rows - identified to the right from the table
 - it can be only (i) Metrics, (ii) Explicit dimensions or (iii) Dropdown lists
- in lower-left hand side there are attributes applicable to the entire table
 - more than one sets of those attributes is possible (multiplying the number of occurrences of those tables)
 - attributes in each set could be (i) Metrics, (ii) Explicit dimension or (iii) Dropdown list (number of occurrences of table is limited to a number of members in Subdomain used), (iv) Typed dimension (number of occurrences of table would become theoretically unlimited)

Templates annotation: Annotating „similar” templates

Z-axis mechanizm

- difference could be identified using a dropdown list in the header of a table multiplying the views (e.g. scope of consolidation)

TP - F1Q(ARS) TP - F1Q(QRS,ADS)

Benefits of two layers

Highly dimensional approach

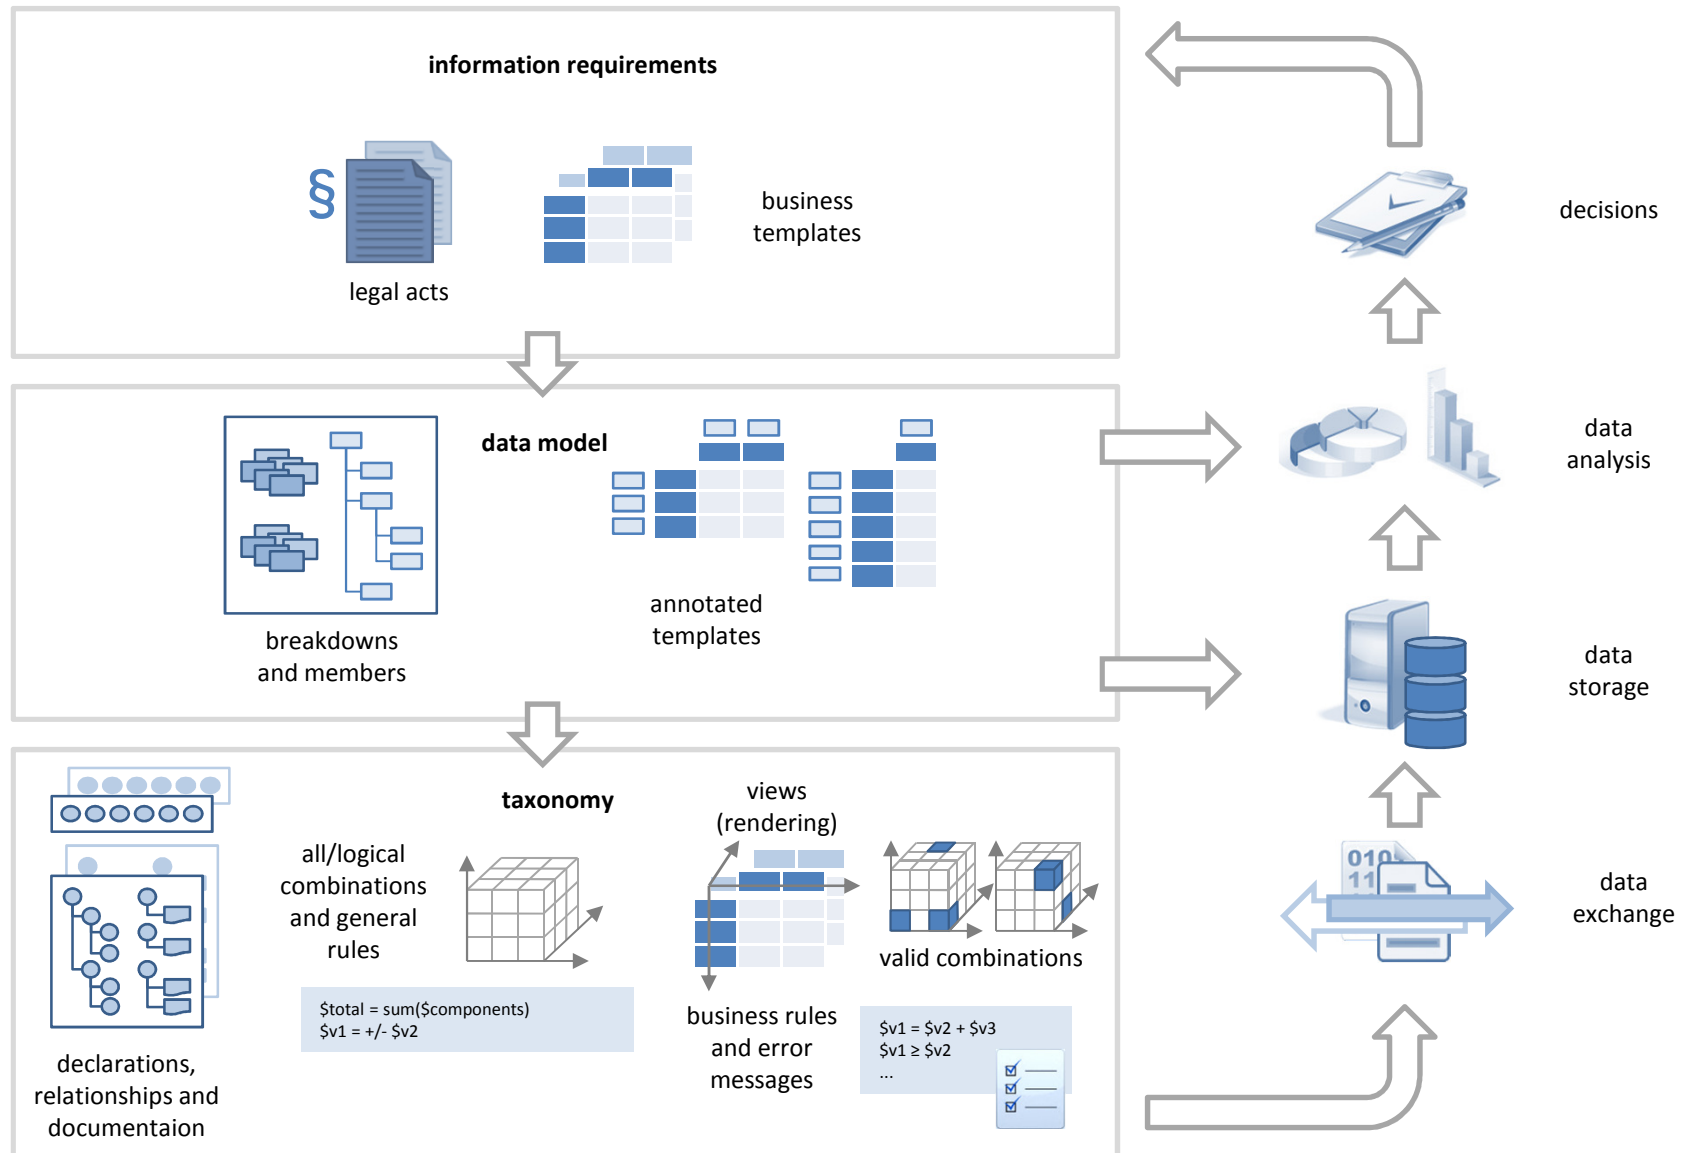

Moderate dimensional approach

4. Proof-of concept taxonomy

DPM and XBRL Taxonomy

Development process and relationships

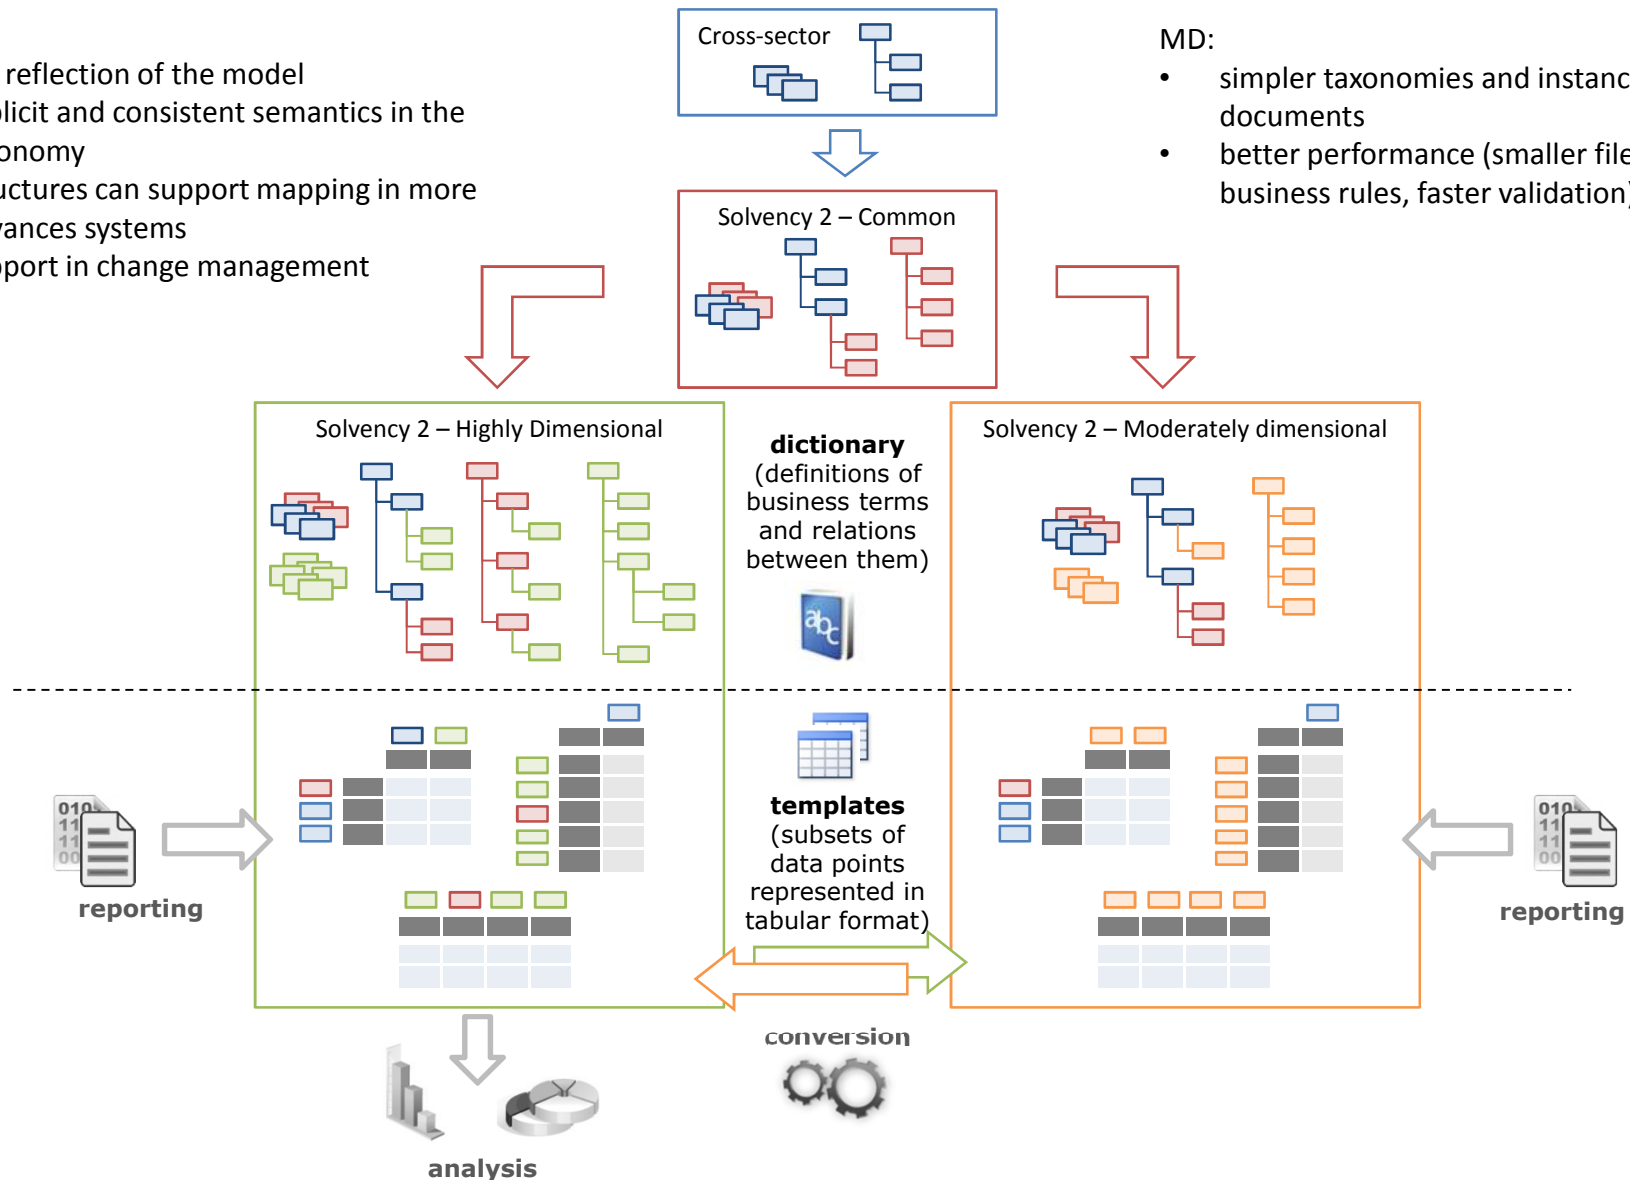

POC XBRL Taxonomy modularization

HD:

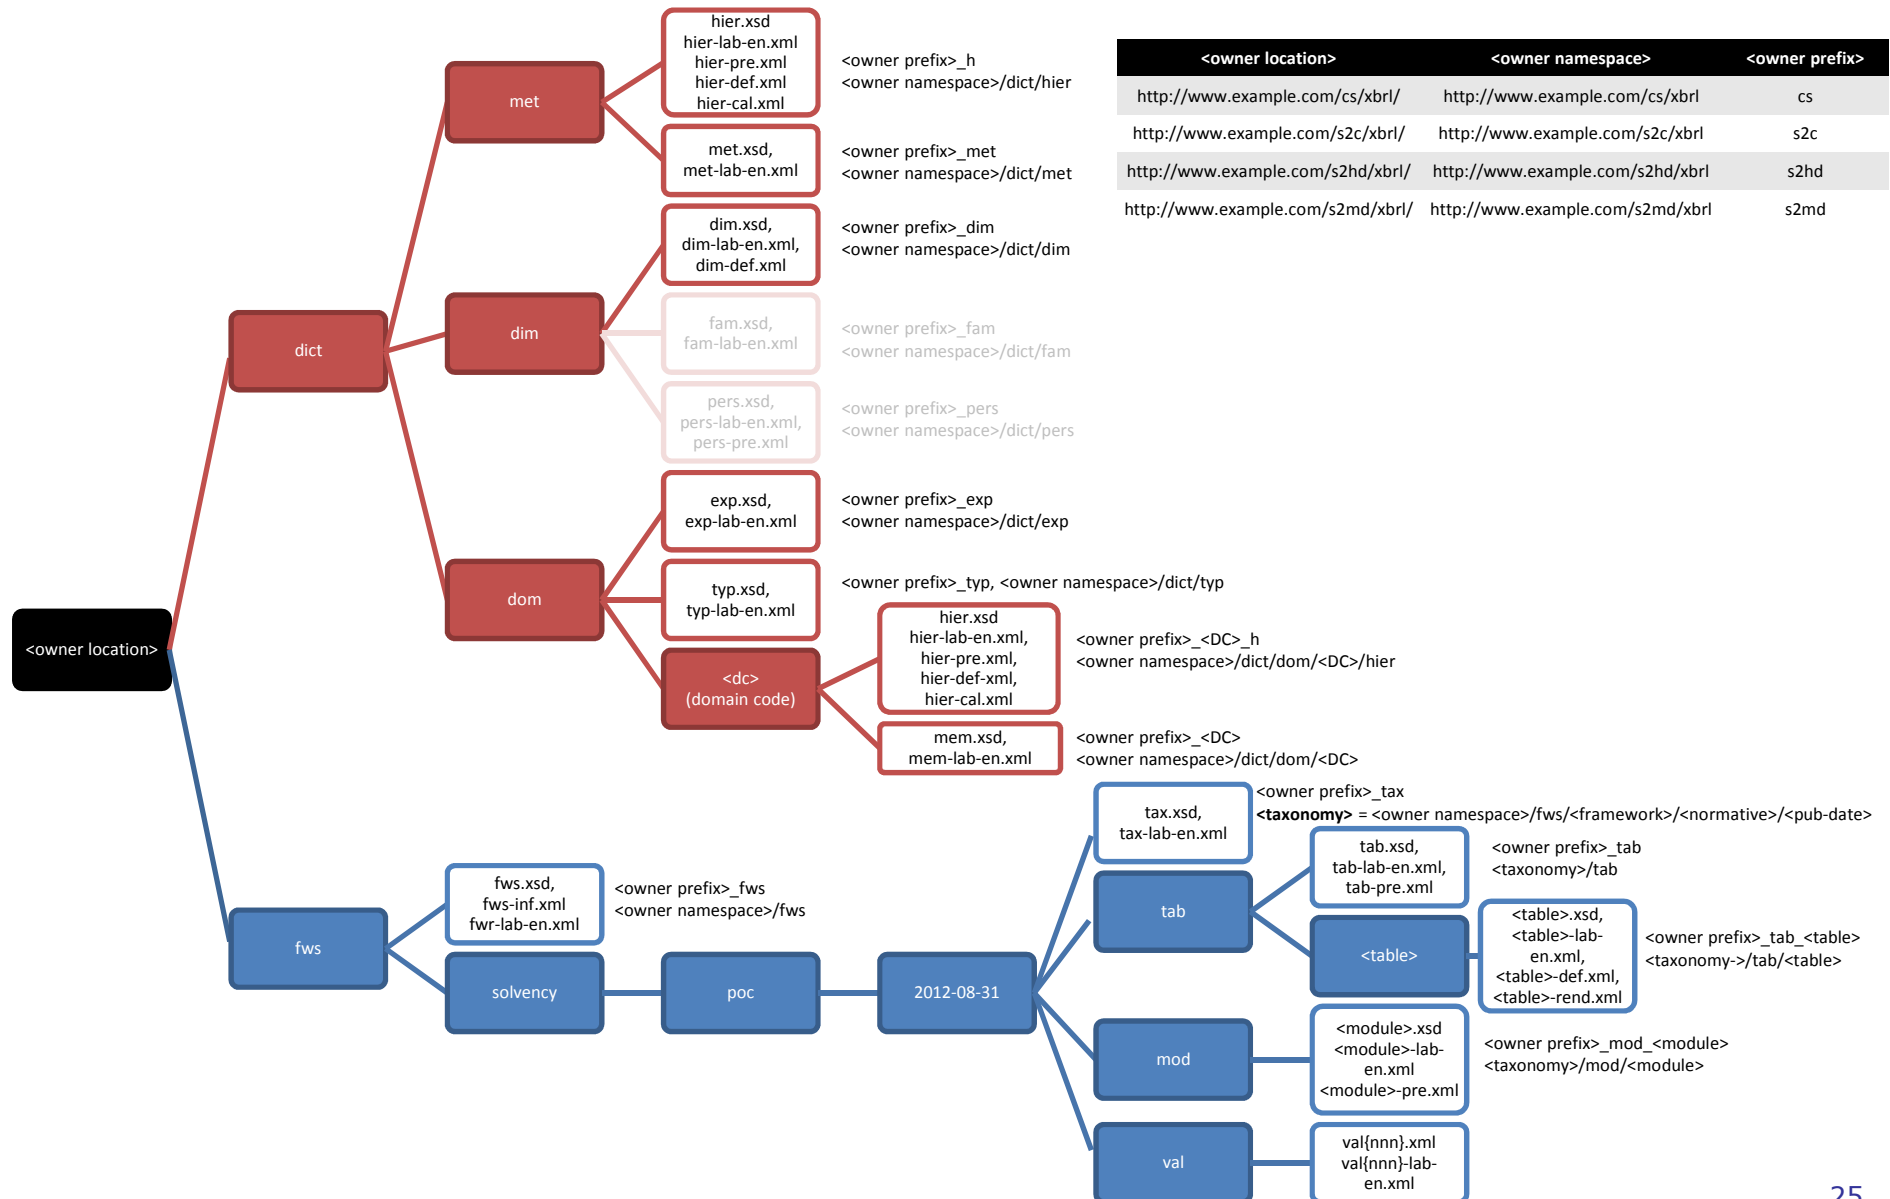

- 1:1 reflection of the model
- explicit and consistent semantics in the taxonomy
- structures can support mapping in more advances systems
- support in change management

MD:

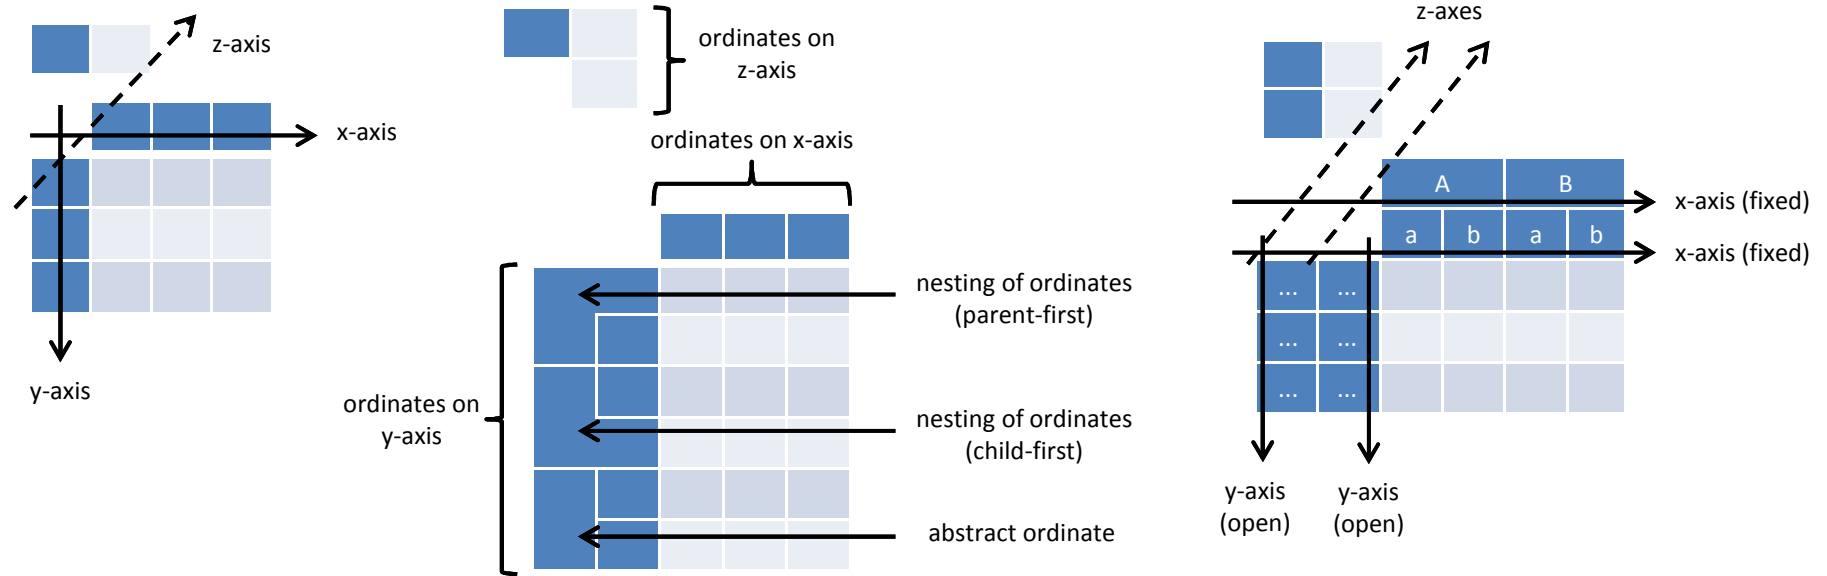

- simpler taxonomies and instance documents
- better performance (smaller files, simpler business rules, faster validation)

POC Taxonomy Architecture and Content

Rendering of tables and valid combinations in XBRL

valid combinations come from hypercubes
(XBRL Dimensions in definition linkbase)

Let's play!

eiopa

5. Important topics and issues

- A dimension ("Valuation general") is used to convey the valuation principle: "Valuation general", with values "Solvency II" or "Statutory accounts" used
 - A single code is used (the QRT will be modified with new codes, unique in the whole SII reporting)
- Items have been added when details are optional
 - When details are provided, the total must also be provided
 - Example: Equities (BS_C1_A7B) added, details: Equities, Listed (BS_C1_A7) and Equities, Unlisted (BS_C1_A7A)

- To avoid meaningless "Other" column
 - A new dimension has been added: "Threshold for material currencies" with two values: ">90%" and " $\leq 10\%$ " (needs to be refined since voluntary reporting may occur for $<10\%$ amounts)
 - The "Other" column corresponds to "Currency"="All", "Threshold for material currencies" = " $\leq 10\%$ "

- Some MDT primary items are common with BS_C1:
 - o BS_C1D_A3 does not exist, it is BS_C1_A4
 - o BS_C1D_A5 does not exist, it is BS_C1_A12
 - o BS_C1D_A11 does not exist, it is BS_C1_L16
 - o BS_C1D_A13 does not exist, it is BS_C1_L23

- Each line of the QRT table describes two objects
 - o Asset
 - o Line of asset
- To avoid duplicated information that would inflate instances and need to be checked, the table has been separated into two tables:
 1. Line of asset table, associated to two typed dimensions:
 - "Line of asset identification" (internal to the undertaking)
 - "Asset identification" (XML sequence of: "ID Code Type" and "ID Code")
 2. Asset table identified by the same "Asset identification" dimension

- Enumerations will have the XML type QName, corresponding to member of Domains

Advantages:

- o Values will correspond to Domain members that are XBRL concepts and may have labels, references...
- o The same domain may be shared by a dimension and a primary item (may be useful for Countries that may be a dimension or a primary item).

- E.g.: non negative monetary or limited length text string
- Implemented by assertions on top of simple XML types

Advantages:

- o The instance is not rejected at a very low level (XML validity)
- o A meaningful message may be associated to the error report (e.g.: "Names must be limited to 180 characters" instead of "XML type error...")

- Each assertion will be associated to
 - o An identification (code) giving
 - The template(s) of the context of the assertion
 - The type of the assertion
 - A rank number
 - o A meaningful label
 - o Optionally, a tolerance margin
- e.g.:
- ID: BS_C1-P400
- Label: « Aggregation to "Loan and mortgages (except loans on policy)" »
- Check that $BS_C1_A14 = BS_C1_A14B + BS_C1_A14C$, with some tolerance margin, for dimension "Valuation general" having value "Solvency II"
- The POC contain a limited set of assertions, showing various patterns

- ID: BS_C1-P400
Label: « Aggregation to "Loan and mortgages (except loans on policy)" »
- Check that $BS_C1_A14 = BS_C1_A14B + BS_C1_A14C$, with tolerance margin = 3000, for "Solvency II value" dimension value

Note: For "Statutory accounts" dimension values, A14B and A14C are not reported

- ID: BS_C1D-D100
- Label: « Dimensional aggregation for currencies »
- Check that, for all rows, the value in the Dimension value "Currency:Total" & "Threshold for material currencies:Total" column is the sum of other columns, with some tolerance margin

- ID: AS_D1-V100
- Label: « For equity, "Total SII amount" shall be equal to "Quantity" x "Unit SII price" + "Accrued interest" »
- Check that $A26 = A22 * A23 + A30$, if A22 exists, provided that A15 (CIC) $\neq \sim / ^{..[7-9].\$ /$, with some tolerance margin

- ID: AS_D1-T100
- Label: « Check the value of non negative monetary items »
- Check that $(AS_D1_A22A, _A23, _A30) \geq 0$

- ID: BS_C1-BS-C1D-V100
- Label: « "Other assets within scope of AS_D1" shall be equal to "Property, plant & equipment held for own use" + "Cash and cash equivalent" »
- Check that
BS_C1D_A4["Currency"="Total"][Threshold for material currencies"="Total"]=BS_C1_A3 + BS_C1_A27 with some tolerance margin

- A "Filing indicator" is a boolean concept
- Each template is associated to a Filing indicator
- When set to true, a Filing indicator means that the data in the template have been filed
- The assertions in a template are evaluated only if its Filing indicator is true
- Cross-template assertions are evaluated only if all the filing indicators of the needed template are reported

E.g.: BS_C1-BS_C1D-V100 is evaluated only if both BS_C1 and BS_C1D are reported (BS_C1D is optional)

Thank you!
